

MOISTURIZING BAR SOAP

Our Save Your Skin™ moisturizing soaps are naturally made with no animal fat or by-products instead we use saponified oils of palm/palm kernel or coconut oils and retain the glycerin producing a great creamy lather. To help provide antioxidants, vitamins and minerals we also add Vitamin E which is helpful in the reduction of free-radicals on the skin.

We invite you to try our soaps and take the lather challenge – our soaps provide gentle astringent feel to the skin with nutrient-rich organic Yerba Maté. High concentrations of organic Aloe Vera rejuvenate and soothe the skin and assist in moisture retention and the absorption of antioxidants.

Lather Up!

SAPONIFIED OILS OF PALM/PALM KERNEL AND/OR COCONUT OIL

WITH RETAINED GLYCERIN: These vegetable oils are saponified by mixing them with sodium chloride, which produces soap and glycerin. The saponification process retains the glycerin to the highest levels, allowing for a rich lathering, moisturizing soap.

WATER: Water

PURE NATURAL ESSENTIAL OILS: We use carefully selected pure natural essential oil blends to provide our pleasantly fresh and unique aromas, as fresh and unique as the rainforest we preserve.

SODIUM CHLORIDE: Natural Salt that is used to react against the vegetable oils in the saponification process to create soap.

ORGANIC ALOE VERA EXTRACT: We use only certified organic Aloe Vera extract sourced by the world's oldest and largest manufacturer and grower of Aloe Vera from a farm in the Dominican Republic. Aloe has been used for centuries as a rejuvenator of cells and adds cool, soothing properties to the skin.

ORGANIC YERBA MATÉ EXTRACT: We are the first company in the United States to utilize this Southern Brazil nutrient rich tree leaf extract in a complete line of personal care products. This certified organic extract has skin strengthening properties and is rich in vitamins, minerals and antioxidants.

CHLOROPHYLLIN-COPPER COMPLEX (NATURAL GREEN COLORANT): We color our soap green to match our mission using a plant based stabilized chlorophyll mixture.

CITRIC ACID: A naturally occurring acid found in citrus fruits such as lemons, oranges and grapefruit which we use as an acid balancer or preservative.

TOCOPHERYL (VITAMIN E): A vitamin known according to studies to protect the skin from UVB damage (sunburn cell formation). Used as an anti-aging regimen having restorative and rejuvenating effects on the skin.
